

such as asthma and congenital cysts; diseases of the heart and vascular system, including those of the hæmatopoietic system such as arteritis of the superficial temporal artery; diseases of the endocrine system such as intermittent hypothermia; familial and obscure conditions; therapeutics such as artificial pneumothorax in lobar pneumonia, and artificial fever, and the use of insulin and protamine insulin in diabetes and non-diabetic conditions, and numerous others. Finally, there is the section on diseases of the nervous system with particular reference to the psychological aspects of pædiatric practice. It is of interest to note this last contributor believes many of the neuroses have their basis in the dissatisfaction of the feeding problems of infancy. He insists the mother should play a passive rôle, whether feedings are from the breast or the bottle; he insists the baby should be judged according to its demands for food, and the mother or doctor should estimate how often this infant requires its food, "he really wants a loving, gentle and self-confident mother". "The emotionally secure mother does not have feeding problems". He regards weaning as the first major frustration problem of an infant's life, and believes the pleasure of sucking is transferred to the toes, fingers, and other pleasurable habits. Incorrect feeding and elimination habits should be approached from the psychological angle before the physical is considered.

The Conquest of Cholera, America's Greatest Scourge. J. S. Chambers. 366 pp., \$4.25. Macmillan Co., Toronto, 1938.

The author, Professor of Hygiene at the University of Kentucky, is too modest in calling this a "rather sketchy narrative". It is an excellent account, full of interesting data, well illustrated, and worthy of the fine frontispiece and tutelage of the great Daniel Drake.

Approved Laboratory Technique. J. A. Kolmer, M.D., D.P.H., Sc.D., LL.D., L.H.D., F.A.C.P. and F. Boerner, V.M.D. 2nd ed., 893 pp., illust., \$8.00. D. Appleton-Century Co., New York, 1938.

The second edition like its predecessor is undoubtedly one of the best books for laboratory workers and students interested in laboratory technique. The added chapters on Methods of Diagnosis in Early Pregnancies; Mycology; Allergy Tests; Histological Methods and the Preparation of Museum Specimens, make this book the most complete of its kind.

BOOKS RECEIVED

Research Memoranda in the Depression. 13 bulletins. \$1.00 per copy. Published by The Social Science Research Council, New York, 1937.

Orthodiascopy. C. M. Kurtz, M.D., F.A.C.P. 247 pp., \$3.50. Macmillan Co., Toronto, 1937.

Food and Physical Fitness. E. W. H. Cruickshank, M.D., D.Sc., M.R.C.P., F.R.S.E. 148 pp., \$1.50. Macmillan Co., Toronto, 1938.

Digestive Tract Pain. C. M. Jones, M.D. 152 pp., \$2.50. Macmillan Co., Toronto, 1938.

The Radiology of Pulmonary Tuberculosis. J. E. Bannen, M.B., Ch.B., D.M.R.E. 156 pp., illust. Macmillan, Toronto, 1937.

Introduction to Bacteriological Chemistry. C. G. Anderson, Ph.D., D.Bact. 278 pp., \$3.00. Macmillan Co., Toronto, 1937.

Transaction of the American Association of Genito-Urinary Surgeons. Vol. 30. 417 pp., illust. Bruce Publishing Co., Saint Paul, 1937.

Pocket Guide to Medical Life Assurance. J. J. Cursetji, M.D. 274 pp., \$4.00. Published by author, 130 Banoo Mansion, Bombay, 1932.
